## **Forklift Instructor Training Victoria**

Forklift Instructor Training Victoria - For those forklift operators who would like to become a lift truck instructor it is recommended that they complete a forklift Instructor training certification course. Entry qualifications for the forklift instructor training requires the forklift operator to have extensive knowledge about forklift equipment and skills driving forklifts. Instructor training usually is held at an equipment sales facility or at the campus of a junior college, community college, or vocational or technical school. Forklift manufacturing companies occasionally offer practical, hands-on, train-the-trainer programs.

Whether offered in a classroom setting or at a manufacturing company facility, registering for the program would involve paying a tuition fee, and buying books, manuals or other materials. Course length varies depending on the program. Participants generally need to have satisfactory participation, demonstration, and test scores throughout the course to qualify for trainer certification.

Instructor courses usually assume that those participating have previous experience as forklift operators. The focus of the instructor training is on topics like teaching techniques, ethics, curriculum design and safety issues. Participants would know how to demonstrate to their students various aspects of forklift utilization, like for instance moving and stacking materials or navigating the lift truck in narrow aisles. Participants will know how to assess student's written tests and demonstrations of their lift truck operating skills. The program objective is to be able to prepare trainers to be able to design and execute their very own forklift training courses.

It is required to perform some self-study of the machinery and handbooks. The trainers will in the end be responsible for making their very own curriculum which satisfies specific guideline regulations in terms of the subjects presented, such as Operation and Safety. Like for example, the subject of Safety has to include an understanding of how to identify possible dangers. The topic of Operation consists of instruction about attaching and using, controls and instruments and maneuvering and steering the fork.
