

## **Manlift Ticket Victoria**

Manlift Ticket Victoria - The Elevated Platforms and Manlifts Certification course helps to provide the required training on the safe operating procedures, work practice, regulations and rules regarding the everyday activities for the operators of this machinery. The program has been designed for people who are actively involved in these activities or those who have a basic understanding of this equipment.

During the last couple of decades, aerial platforms and manlifts have become a common sight on construction job sites and in industrial maintenance applications. These equipment provide an easy way to lift workers near what has to be carried out on a stable platform apparatus, enabling staff to carry out tasks with greater safety and comfort rather than being perched on top of scaffolding or ladders.

The manlift is like other industrial devices in that they are safe if utilized properly. Since they lift staff above floor or ground level, accidents can easily happen and this could cause serious death or injuries for both the manlift operators and any passerby who may be unlucky enough to be standing below.

Manlifts come in a variety of models. Nearly all fit into 1 or 2 categories: the scissor lift, which is capable of moving up and down and the articulating boom lift, that can move both vertically and horizontally.
